## Python Operators Cheat Sheet

## Assignment

| $=$ | Assignment $\mathrm{a}=2$ value of a becomes 2 |  |
| :--- | :--- | :--- |
| $+=$ | Addition and assignment | $\mathrm{i}+=1$ is the same as $\mathrm{i}=\mathrm{i}+1$ |
| $-=$ | Subtraction and assignment | $\mathrm{i}-=1$ is the same as $\mathrm{i}=\mathrm{i}-1$ |
| $*=/=$ etc | all other operators can be using in conjunction <br> with the assignment operator |  |

## Arithmetic operators

| Operator | Description |  |
| :--- | :--- | :--- |
| + | Addition |  |
| - | Subtraction |  |
| $*$ | Multiplication |  |
| $/$ | Division | $3 \% 2=110 \% 7=3$ |
| $\%$ | Modulus (or remainder) | $2^{* *} 4=16$ |
| $* *$ | Exponent (or power) | $3 / / 2=110 / / 3=3$ |
| $/ /$ | Floor division (or integer division) | $\mathrm{abs}(-2)=2 \mathrm{abs}(2)=2$ |
| abs() | absolute value (distance from zero) |  |

## String operators

| + | Concatenation | "word "+" more" becomes wordmore |
| :--- | :--- | :--- |
| $*$ | Multiplication | "word"*2 becomes wordword |
| <string> [] | index |  |
| <string> [:] | slice (or range) |  |
| len(<string>) | length of string | len("word") is 4 |
| for I in <string> | iteration through characters |  |

## Comparison Operators

| $==$ | returns true if values are equal | $1=1$ true "test" $=={ }^{\prime \prime}$ test" true |
| :--- | :--- | :--- |
| $!=$ | Returns true if values are not equal | $2!=1$ true "test" $!={ }^{\prime \prime}$ test" false |
| $<>$ | Returns true if values are not equal | $2<>1$ true "test" $<>$ "test" false |
| $>$ | Greater than | $2>1$ is true |
| $<$ | Less than | $2<1$ is false |
| $>=$ | Greater than or equal to |  |
| $<=$ | Less than or equal to |  |

## Logic Operators

| and | logical AND returns true if both operands are true | $1=1$ and "test" $=$ "test" is true |
| :--- | :--- | :--- |
| or | logical OR returns true if either operand is true | $1=1$ or "test" $=$ "bit" is true |
| not | logical NOT reverses operand | not(1=1) is false |

## Membership Operators

| in | tests if left operand is in a collection | 1 in $[4,5,1,3,5]$ is true |
| :--- | :--- | :--- |
| not in | tests if left operand is not in a collection | 1 in $[4,5,1,3,5]$ is false |

## Binary Operators

| $\&$ | Binary AND copies bit where it exists in both <br> operands | $0011 \& 1001$ becomes 0001 |
| :--- | :--- | :--- |
| I | binary OR copies bits where it exists in either <br> operand | $0011 \mid 1001$ becomes 1011 |
| $\wedge$ | binary XOR copes the bit where it exists in only <br> one operand | $0011^{\wedge 1001}$ becomes 1010 |
| $\sim$ | binary one's complement (unary*) reverses bit <br> value | 0011 becomes 1100 |
| $\ll$ | binary left shift Left operand is shifted left by <br> number of bits in right operand | $0011 \ll 2$ becomes 1100 |
| $\gg$ | binary right shift Left operand is shifted right by <br> number of bits in right operand | $1001 \gg 2$ becomes 0010 |

## Operator Precedence

| $* *$ | Exponentiation |
| :--- | :--- |
| $+x,-x^{\sim} \sim_{x}$ | Positive, negative, bitwise NOT |
| $*, /, / /, \%$ | Multiplication, division, remainder |
| ,+- | Addition and subtraction |
| $\ll, \gg$ | Shifts |
| $\&$ | Bitwise AND |
| $\wedge$ | Bitwise XOR |
| $\\|$ | Bitwise OR |
| in, not in, is, is not, $<$, <br> $<=,>,>=,!=,==$ | Comparisons, including membership tests and identity tests |
| not | Boolean NOT |
| and | Boolean AND |
| or | Boolean OR |
